

## About Us

GoMidjets provide Configuration Management (CM) turnkey add-ons for IBM Rational ClearCase and professional consulting services.

Our reputation is built upon many years of experience in all aspects of software development, improving and automating of configuration management (CM) and application lifecycle management (ALM) processes and system administration in variety of platforms. We use leading tools and techniques including suites by IBM Rational, Microsoft and most Agile methodologies.

Our experience and knowledge help us create better and smarter products for our customers to build more usable and stable software for the benefit of their clients.

### GoMidjets ClearCheck

#### Easily Check the Integrity of your ClearCase Database

ClearCheck ensures peace-of-mind: Its main purpose is to recognize and inform you about problems in IBM Rational ClearCase infrastructures as early as possible (VOBs, views, global types, free space etc.). ClearCheck works on Windows, UNIX and Linux platforms.

### GoMidjets CompBL

#### Easily Compare ClearCase UCM Baselines and Streams

CompBL enables you to get control of your ClearCase assets! It compares baselines, streams, activities and composite baselines. It can filter out internal activities ("rebase" and "deliver" activities) and produce automatic and dynamic reports which include each activity's files and versions (change-set).

### GoMidjets ClearEnv

#### Centralized Management of Environments and Methodologies over UCM

ClearEnv simplifies ClearCase UCM for you: It enables developers, team leaders and QA engineers to automatically and independently create their own environments - ClearCase views and streams - on Windows, UNIX and Linux platforms. This goal is achieved by using predefined methodologies.

## We also supply professional consulting services in CM and ALM concepts and tools:

### In-depth knowledge of tools and suites

- IBM Rational Suite: ClearCase and UCM, ClearQuest, RequisitePro, Asset manager and Rational Team Concert (RTC, Jazz)
- Subversion (SVN) and Bugzilla
- Microsoft Visual Studio TeamSystem (VSTS)

### Application Life-cycle Management (ALM) Strategy and planning

- Inspection and gap analysis
- Requirements Management
- Planning and Design
- Implementation and Development, Configuration and Change Management
- Integration
- Testing (QA)
- Release Management

### Advanced and Unique CM & ALM Services

- Virtualization - VMware and Microsoft Virtual PC
- ClearCase and ClearQuest 7.1 upgrades
- Disaster Recovery Plan (DRP)
- Automate customization of systems (scripts, triggers, wrappers and 3rd-party integrations)
- Performance improvement
- Build management and automation
- Installation and setup wrappers (InstallShield, Inno Setup and MSI)
